EDUCATION

Javascript Logic

Young School IT Education

2022-2023

I studied javascript logic in young school and graduated very well.

Frontend Developer

Na'jot Ta'lim

2023-2024

 I am a graduate of Na'jot Ta'lim. I will make your work successful.

LANGUAGES

Uzbek

English

Russia

PROFILE

I am Junior Frontend Developer. I am 17 years old. First, I was interested in chess and went for 2 years, and from there I improved my logic a lot. Then I tried mine in javascript. I pay a lot of attention to website styles. I was also able to get out of some website problems quickly and easily. After I get a project, my main goal is to become a Team Leader, to help everyone and show myself not only from the programming side, but also from other sides. I will ensure that your project is done quickly and qualitatively.

WORK EXPERIENCE

INAVATION DEVELOPMENT AGENCY

About Inavation Agency   2023-2024

- It is a company based on higher education, science and innovation. It belongs to the section of state webistes.
- The client ordered to create a website related to this project, and I created the onlineandoza.uz website. This company was for a start up project.
- I'm a website developer here, so I'm constantly looking at it, and I have to fix it if I see any mistakes.
- These companies are created by the state and often include individuals.
- The company provides information to people mainly about the state future, state news and state activities. Special attention is paid to the youth support department.
- This project will be sponsored by the company and I will be the creator. This project will be needed by the company to develop and improve some things in the future. This project is still a promotional version, many things are still to be added.
- If I have to work in this company again, I would not say yes.
- I mainly pay attention to Team Leader when doing company or other projects. I would have been a Team Leader in the company. Unfortunately, we don't have a team, I work alone.

MOON UP

About freelancers and orders   2024

- Moon Up was initially a start-up project, later it became a production company. It currently has 5 active employees.
- We started forming a team from March 2024. Here you will get paid according to your work.
- Project IT vacancies. There will be order takers and order givers (clients). Our Team Leader manages the order takers, ie IT managers. Examples of them are: Frontend, Backend, UI/UX, Game Developer, Project Manager, etc.
- When you come to work here, it doesn't matter whether it's hourly, job done or monthly.
- You can get a job after qualifying in the company. If you don't have experience, you have to work for an internship. But mostly, your knowledge is more important.
- The company also has an admin panel that manages employees. We are currently fixing the bugs and this website will be up and running soon.
- On average, 200 people show up for the screening, and 100 pass or fail.
- We often have more and more Frontend React workers, which is good on the one hand.
